Exercise 1⁺ 3

 Solution 3

Exercise 2 3

 Solution 3

Exercise 3* 3

 Solution 3

Exercise 1⁺

Solution

Exercise 2

Solution

Exercise 3^{*}

The Nelder-Mead algorithm has three parameters α , β , and γ . How would you approach the problem of tuning these parameters?

- α

scaling factor for the reflection step

$$x_r = x_m + \alpha \cdot x_m - x_h$$

- β

scaling factor for the expansion step

$$x_e = x_m + \beta \cdot (x_r - x_m)$$

- γ

Solution
